

IDEALPAK'S PET JARS WITH ADJUSTABLE MOLDS

Adjustable molds are molds with adjustable bottoms. With a fixed outer diameter, we can change the height of a container by adjusting the bottom of the mold. In this way, we can develop bottles and jars with the same diameter in different sizes very quickly. Adjustable molds are ideal choices for brand owners who want to develop serial products in the same shape but in different sizes. With very short lead time and very low cost, your serial products can go to life.

PET jars with these neck sizes are available in adjustable molds: 43/400, 56/400, 63/400, 68/400 and 89/400.

The following items are our current available jar molds. If none of our current molds meet your need, you can also develop a new size of the jar by adjusting the height of the container.
